Executive Risk Assessment Summary

Probability of Default:	22.02%
Credit Risk Score:	728
Risk Category Tier:	MEDIUM RISK
Decision Action Recommendation:	MANUAL REVIEW

Explainable AI (Local SHAP Attributions)

Below is the local attribution weighting of variables contributing to default risk. Positive values push default risk higher; negative values indicate mitigating factors.

Credit Variable Feature	SHAP Value Contribution	Risk Attribution
Revolvingutilization Of Unsecuredlines	-0.0578	Mitigating Factor
Age	+0.0253	High Risk Factor
Number Of Time30-59 Dayspastduenotworse	-0.0321	Mitigating Factor
Debtratio	+0.0096	High Risk Factor
Monthlyincome	-0.0178	Mitigating Factor
Number Of Opencreditlinesandloans	-0.0412	Mitigating Factor
Number Of Times90 Dayslate	-0.0164	Mitigating Factor
Number Real Estateloansorlines	-0.0136	Mitigating Factor
Number Of Time60-89 Dayspastduenotworse	-0.0094	Mitigating Factor
Number Of Dependents	+0.0000	Neutral Impact

AI-Generated Decision Narration

Prediction analysis details: The high credit risk is primarily driven by your age, and secondarily compounded by your debt ratio, and mitigated by your positive history of revolving utilization of unsecured lines.
